

Reconstruct $x(t)$ from PD Volterra Eq.
with $c_0 = 0, c_1 = 0$ (noise = 0.10%)

$$\frac{\|\hat{x}_{\text{spec}}(t) - x(t)\|_{L^2}}{\|x(t)\|_{L^2}} = 1.514\text{e-}02$$

$$\frac{\|\hat{x}_{\text{data}}(t) - x(t)\|_{L^2}}{\|x(t)\|_{L^2}} = 4.090\text{e+}00$$
